Project Guide Name	Ms.Kavitha.M AP/CSE

Abstract:-

In a world with an accelerated population aging, there is an increasingly interest in developing solutions for the elderly living assistance. The Internet of Things is a new reality that is completely changing our everyday life, and promises to revolutionize modern healthcare by enabling a more personalized, preventive and collaborative form of care. Aiming to combine these two important topics, this projects is about an IoT -ready solution for the elderly living assistance which is able to remind them. When it comes to reminding there can be many ways like by sending notification on email or phone, buzz alarm or get a call. To keep things simpler here we are using this project which reminds us to take medicines 1 or 2 or 3 times a day. The time slots can be selected using push buttons. Arduino is used. This result will help the elderly patients to manage their health care properly

KEYWORDS: Reminder system, IOT, Arduino, Push buttons
